GIRISH BISSESSUR

bissgirish22@gmail.com linkedin.com/in/girish-bissessur ◇ github.com/BGISS

EDUCATION

Honours BSc in Computer Science, University of Ottawa — Expected Dec 2026
Current CGPA: 9.67/10 — Dean's Honours List (Fall 2022 – Winter 2026)
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Machine Learning, Real-Time Systems

SKILLS

Programming Languages	Java, C, Python, C++, JavaScript, TypeScript, C#, Golang, SQL
Development Tools	Git, Docker, Kubernetes, Helm, Jupyter, PostgreSQL, MySQL, Unix/Linux, AWS
Frameworks & Libraries	React.js, Laravel, Express.js, GraphQL, Playwright, JUnit, TensorFlow, Pandas

EXPERIENCE

Software Developer Co-op — Trend Micro — May 2026 – Aug 2026

- Engineered AI-agent-driven automation for frontend development workflows, reducing manual effort and accelerating feature delivery across the team
- Built a custom linter using Python and Ruff to detect hardcoded design tokens and styles bypassing the internal design system, enforcing consistency across the codebase
- Built a second linter to flag supply-chain security risks in GitHub Actions dependencies within the CI pipeline

Full Stack Software Developer Co-op — Distiller SR — Sep 2025 – Dec 2025

- Built full-stack features spanning Laravel and PHP backend services with a React.js and TypeScript frontend
- Led an infrastructure upgrade that strengthened system security and improved overall performance by 30%
- Generated GraphQL API endpoints that streamlined data fetching, reduced network overhead by 40%, and improved MySQL query performance through full-text indexing and batched queries
- Deployed containerized microservices using Docker and Kubernetes, managing releases with Helm charts and integrating CI/CD workflows, logging, and monitoring to ensure scalable, reliable production environments

Software Developer Co-op — Trend Micro — Jan 2025 – Apr 2025

- Shipped 8+ reusable React.js/TypeScript UI components used by 1,000+ enterprise customers
- Executed automated integration testing with Playwright, achieving 80% test coverage and cutting manual testing effort
- Improved application performance in high-traffic workflows by refining core algorithms and optimizing underlying data structures

PROJECTS

IoT Baby Health Monitoring System — C, ESP32, Arduino IDE, Sensors — GitHub

- Built an embedded IoT system on an ESP32 to monitor infant vitals such as temperature in real time
- Programmed firmware in C using Arduino IDE, interfacing directly with sensors for real-time data acquisition
- Implemented threshold-based alert mechanisms to detect abnormal conditions and trigger auto notifications

Hydra: Adversarial Evasion Lab — Python, Docker, LLMs, YARA, Falco — GitHub

- Built a closed-loop lab where a local LLM rewrites a malware-shaped sample to evade signature (YARA) and behavioral (Falco/eBPF) detectors, quantifying each detector's robustness
- Designed a multi-stage Dockerized pipeline with a live SSE dashboard to visualize evasion iterations in real time
- Enforced strict safety guarantees, including network isolation and no persistence, ensuring mutated code never behaves as functional malware

Similarity Search Image Processor — Go, Concurrency, Data Structures — GitHub

- Built a concurrent image similarity search tool in Go using goroutines, parallel processing, and efficient memory management
- Increased throughput by applying multi-threaded design patterns and optimized data structures
- Designed an image comparison pipeline capable of processing large-scale image datasets
